STATEMENT OF COMPATIBILITY

between
Kaspersky Industrial CyberSecurity
the product of
AO "Kaspersky Lab"
39A/2 Leningradskoe Shosse,
Moscow, 125212, the Russian Federation
hereinafter referred to as "KICS" and "Kaspersky" respectively

and
Software of software and hardware complex "UniSCADA"
The product of
"Relematika" LLC
1 Yakovleva Ave., Cheboksary, 428020, Chuvash Republic, Russia
hereinafter referred to as «UniSCADA» and «Relematika» respectively.

Relematika and Kaspersky Lab hereby declare the possibility of mutual apply of the mentioned software products in unified information system, compatibility of these software products, allowing to meet certain information security requirements for automated process control systems (hereinafter referred to as APCS), these products are operated.

UniSCADA is the automated process control system and is used in the field of industrial automation. KICS is an integrated cybersecurity solution for critical infrastructure and industrial automation.

Relematika and Kaspersky Lab conducted extensive testing of the UniSCADA and KICS compatibility within unified information system. Tests proved the possibility of use the products in unified information system, taking into account their individual environmental requirements. The tests have not revealed any compatibility problems in products.

Installed together, according to requirements and installation and control guidelines, in the unified information environment, UniSCADA and KICS products enable you to meet some of your information security requirements. Defined in the Federal law of 26.07.2017 No. 187-FZ "About safety of critical information infrastructure of the Russian Federation".

Besides installing and using both products, other measures may be necessary to complete all information security requirements for each specific class of automated systems. The actual measures taken should depend on the specific information security requirements for the object, as well as the APCS architecture of the object. Such measures may include, but are not limited to, installation and implementation of other software or hardware products, appropriate product configuration, and creation or adjustment of organizational processes.
